

## Laminar

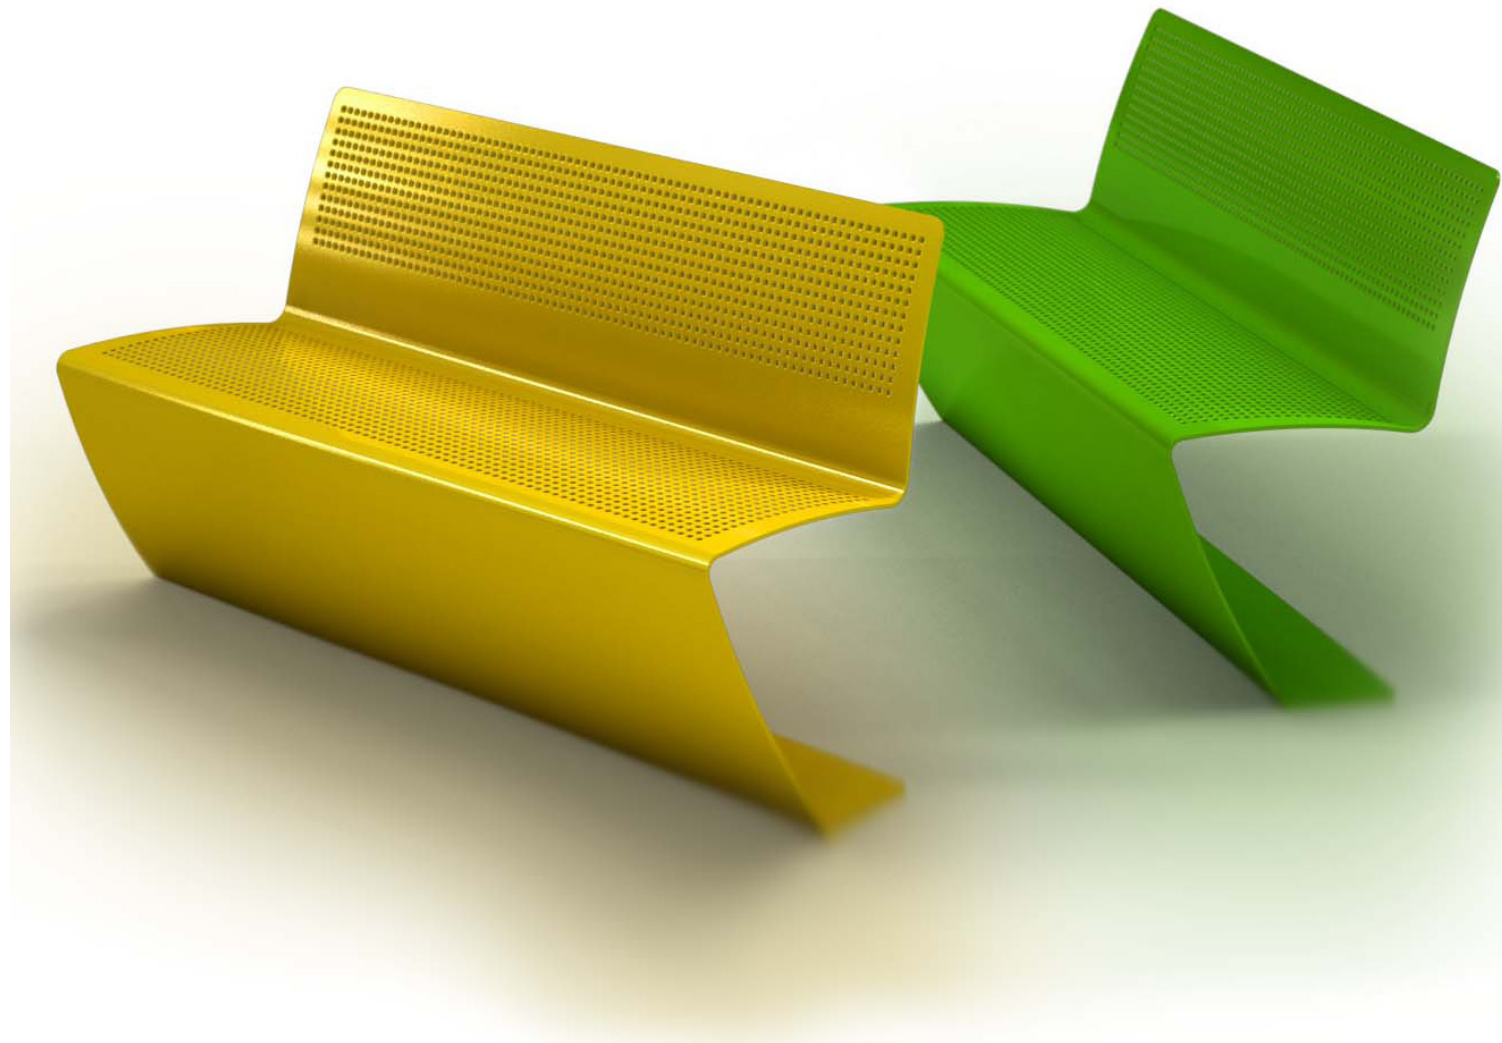

The Laminar bench focuses on its innovative design and anti-vandalism by not having any loose or exposed parts. This results in optimal performance for the center city and other public sectors with little supervision.

The laminar bench was designed from a single sheet of cold rolled carbon steel 1/4" - 6.35 mm (6 mm in stainless steel) in thickness without any additional elements to the sheet itself.

Despite its impressive thickness of 1/4" - 6.35 mm (6 mm in stainless steel) thick, the design creates a sense of lightness in contrast to the reality of the structure.
